🇫🇷 French (C-Permit)

Skills

Programming

Typescript: Node, React, Vue, TypeORM, Featherjs, Express

Python: Flask, FastAPI, Pytest

Databases: PostgreSQL, MongoDB, MySQL, MSSQL

AI/ML & Computer Vision

Machine learning: Pandas, Numpy, Scikit-learn, TensorFlow, Keras

Computer vision: OpenCV, Keyence, MVTec

Embedded Systems

Raspberry Pi, Arduino, Linux, LoRa, WebSockets, MQTT, Balena

DevOps

Git, Docker, Grafana, Balena Cloud, OpenTelemetry, AWS, GCP, CI/CD

Leadership & Process

Software architecture & API design, Jira, Agile workflows, release management, code reviews, TDD, team coordination, technical client management

Languages

French: Native

English: Professional Proficiency

Spanish: Basic Knowledge

Overview

Engineer with 5+ years of experience taking products from idea to production, across the full stack and across disciplines, from backend APIs and frontend interfaces to embedded systems and industrial vision. Comfortable owning complex projects end-to-end, coordinating cross-functional teams, and making architectural decisions. As comfortable writing code as talking to clients or defining a roadmap. Looking for a role where technical depth and product ownership go hand in hand.

Experience

Full-Stack Engineer - Oratek

Oct 2023 - Now

- Led full-stack development and deployment of multiple concurrent products spanning IoT platforms, vision applications, and embedded systems, from requirements to production.
- Defined software architecture, CI/CD pipelines, and code review practices; coordinated the software team on tooling, methodology, and release management.
- Developed web applications for machine control, data visualization, and operator interfaces, plus internal tools to support electronic and mechanical validation.
- Designed end-to-end industrial vision systems and trained custom machine learning and deep learning models for defect detection, classification, and measurement on edge devices.
- Deployed and managed device fleets and provided remote and on-site support for deployed software.
- Managed technical client requirements and acted as primary technical point of contact.
- Leveraged AI coding tools to accelerate delivery while maintaining high code quality and full ownership of the output.
- Collaborated with electronics and mechanical engineers for full system integration.

Full-Stack Engineer - Droople

May 2021 - Sept 2023

- Contributed to backend and frontend development of a SaaS IoT platform using TypeScript in weekly release cycles, including code reviews, CI/CD, and TDD.
- Designed and implemented a data cleaning pipeline, developed neural networks, created data visualizations, and shipped new product features.
- Owned the full delivery of a custom client solution, from requirements gathering and spec writing to roadmap definition and implementation.
- Internalized firmware development within the engineering team.
- Conducted EPFL master thesis on hot water demand prediction using a Probabilistic Neural Network (PNN)

Education

Master in Electrical Engineering - EPFL

2019 - 2022

- Master thesis on hot water demand prediction using a Probabilistic Neural Network (PNN)

Bachelor in Electrical Engineering - EPFL

2016 - 2019

- One year exchange at KTH Stockholm in 2018.
